SUPERIOR TECHNOLOGY

A core objective for ZO® is to use the best and most effective ingredients available – with the goal of delivering the best results. The Brightalive® technology contains a breakthrough blend of ingredients that addresses discoloration seven different ways, resulting in superior results without irritation or stinging.

Hydroquinone is a highly effective treatment of moderate to severe hyperpigmentation, especially melasma. This potent compound gradually bleaches and lightens skin conditions such as chloasma, freckles, lentigines and sun damage. Hydroquinone should be used for a maximum treatment period of five months in order to avoid inflammation, rebound hyperpigmentation and reduced tolerance. After this treatment period, patients can maintain their results with the ZO® Non-Hydroquinone Brightening System.

NON-HYDROQUINONE

For patients who want an effective hyperpigmentation treatment without hydroquinone, the ZO® Non-Hydroquinone Brightening Portfolio is the optimal choice. These brightening treatments rapidly brighten and even skin tone, minimise redness, improve skin colour and reverse the signs of ageing.

RETINOL SKIN BRIGHTENER

This effective retinol blend reduces the appearance of uneven skin tone and age spots, and provides antioxidant protection for a brighter skin tone.
